WITH GLOBAL
COMPONENTS

Rear view

Single pole single throw, low voltage switch <u>with maintained closure,</u> for applications that only use one switch. The switch is connected to a remote power control or sequencer (ordered separately) to activate equipment.
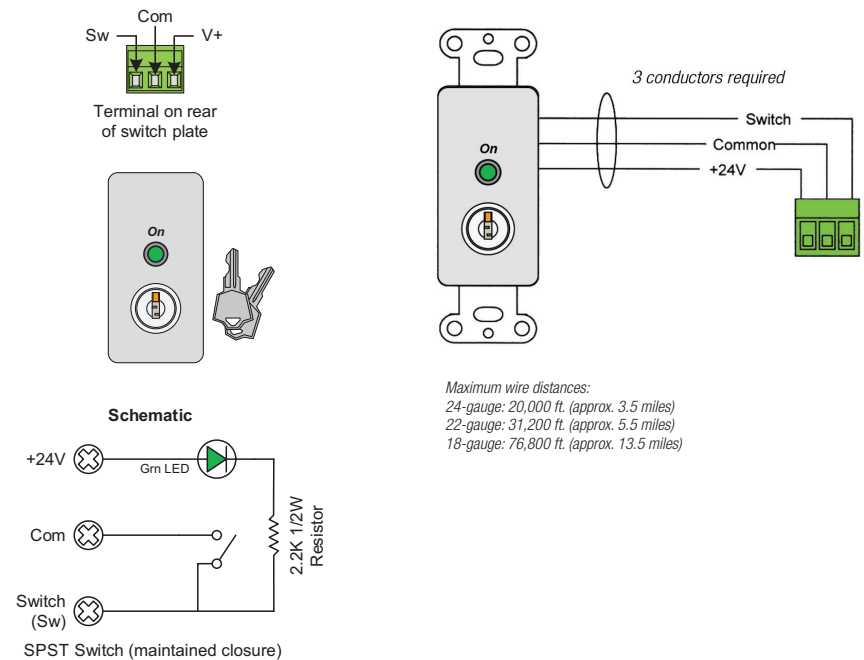

FEATURES

- **Closure:** Maintained closure
- **Activation:** KEY switch
- **Status Indicators:** 1 LED (green) lights when unit is on
- **Connections:** Rear connections are termination strips with wire capacity to 18 gauge.
- **Wall Plate:** Includes 1-gang decorator style wall plate (white plate/sub-plate).
  - *The sub-plate can also be mounted in a 19" rackmount panel with suitable openings, in which case the outer plate would not be used. See Lowell panels D3P-ID-1, D3P-ID-2, D8P-ID-3, D9P-ID-3.*
  - *The sub-plate can also be used in multi-gang decorator style wall plates (by others), in which case the outer plate would not be used.*
- **A&E Specifications:** The low voltage switch for remote activation of equipment shall be Lowell Model RPSW-KP, which shall operate in conjunction with a power sequencer or remote power control (ordered separately). The switch shall feature maintained closure, rear connection termination strips with wire capacity to 18-gauge, white one-gang decorator style wall plate with an LED status indicator, and key activation switch.

This switch is compatible with the following Lowell models (order separately):

ACS-1510-RPC	Power strip w/RPC
ACS-2010-RPC-HW	Power strip w/RPC
ACS-2018-5C-RPC-HW	Power strip w/RPC
ACSP-1502-RPC	Surge suppressor w/RPC
ACSP-2002-RPC	Surge suppressor w/RPC
ACSP-2002-RPC-HW	Surge suppressor w/RPC
RPC-15	Remote power control
RPC-15-S	Remote power control
RPC-15-U	Remote power control
RPC-20-CD	Remote power control
RPC-20-HW	Remote power control
RPC-20-SCD	Remote power control
RPC-20-SHW	Remote power control
RPC-30-SHW	Remote power control
RPC-3N1	Remote power control
RPC-4CD	Remote power control
RY-2A	Relay module
RY-4A	Relay module
SEQ-4	Sequencer
SEQ-P4	Sequencer
SEQ-8	Sequencer

SPST Switch (maintained closure)

Understanding MAINTAINED vs. MOMENTARY Switches:

- **Maintained Switch:** A switch with maintained closure stays in the position you select. When you turn it on, it stays on until you turn it off, and vice versa. An example would be a switch used for a ceiling light, which stays on until you flip the switch to the off position. <u>Specify a maintained switch</u> for applications that use only one switch to control the equipment.

Maintained Switch Schematic Symbol:

- **Momentary Switch:** A switch with momentary closure operates only as long as you press or hold it; the switch returns to its original position as soon as you stop. An example would be a switch for a doorbell, which continues to ring only while you press the switch. <u>Specify momentary switches</u> for applications that utilize more than one switch to control the equipment.

Momentary Switch Schematic Symbol:

LOWELL RPSB- AND RPSW- SERIES OVERVIEW
