

Rear view

This switch requires 4 conductors and is compatible with the following Lowell models (order separately):

| ACR-RPC-1508-SD | Rackmount panel w/RPC |
|------------------|-------------------------|
| ACR-SEQ4-1509 | Rackmount panel w/SEQ |
| ACR-SEQ6-2009 | Rackmount panel w/SEQ |
| ACSPR-RPC1-1509 | Rackmount panel w/RPC |
| ACSPR-RPC1-1509K | Rackmount panel w/RPC |
| ACSPR-RPC1-2009 | Rackmount panel w/RPC |
| ACSPR-SEQ4-1509 | Rackmount panel w/SEQ |
| ACSPR-SEQ4-1509K | Rackmount panel w/SEQ |
| ACSPR-SEQ6-2009 | Rackmount panel w/SEQ |
| MSM2 | Momentary switch module |
| SEQR-8 | Sequencer |
| SEQR-8K | Sequencer |

Single pole single throw, low voltage switch <u>with MOMENTARY closure</u>, for applications that use multiple switches. The switch is connected to a remote power control or sequencer (ordered separately) to activate equipment.

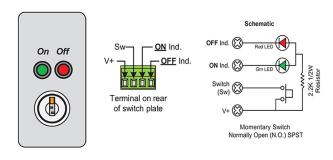

FEATURES

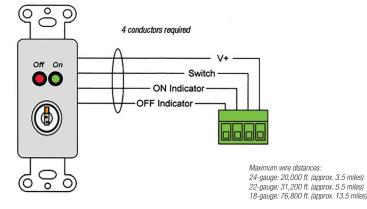

- Closure: Momentary closure
- Activation: KEY switch
- Two Status Indicators: GREEN=ON; RED=OFF.

When used with a rackmount sequencer—the green LED will flash when the unit is powering up and light steadily when on; the red LED will flash when the unit is powering down and light steadily when the unit is off but receiving power (indicating it's ready to operate).

- **Connections:** Rear connections are termination strips with wire capacity to 18 gauge.
- Wall Plate: Includes 1-gang decorator style wall plate (black plate/sub-plate).
 - The sub-plate can also be mounted in a 19" rackmount panel with suitable openings, in which case the outer plate would not be used. See Lowell panels D3P-ID-1, D3P-ID-2, D8P-ID-3, D9P-ID-3.
 - The sub-plate can also be used in multi-gang decorator style wall plates (by others), in which case the outer plate would not be used.
- A&E Specifications: The low voltage switch for remote activation of equipment shall be Lowell Model RPSB2-MKP, which shall operate in conjunction with a remote power control or sequencer (ordered separately). The switch shall feature momentary closure, rear connection termination strips with wire capacity to 18-gauge, black one-gang decorator style wall plate with two LED status indicators, and key activation switch.

TYPICAL WIRING

Understanding MAINTAINED vs. MOMENTARY Switches:

• **Maintained Switch:** A switch with maintained closure stays in the position you select. When you turn it on, it stays on until you turn it off, and vice versa. An example would be a switch used for a ceiling light, which stays on until you flip the switch to the off position. Specify a maintained switch for applications that use only one switch to control the equipment.

• **Momentary Switch:** A switch with momentary closure operates only as long as you press or hold it; the switch returns to its original position as soon as you stop. An example would be a switch for a doorbell, which continues to ring only while you press the switch. Specify momentary switches for applications that utilize more than one switch to control the equipment.

Momentary Switch Schematic Symbol:

LOWELL RPSB- AND RPSW- SERIES OVERVIEW
