

FW2-RD Fan Panel for Rack Rear Door

Installation Instructions

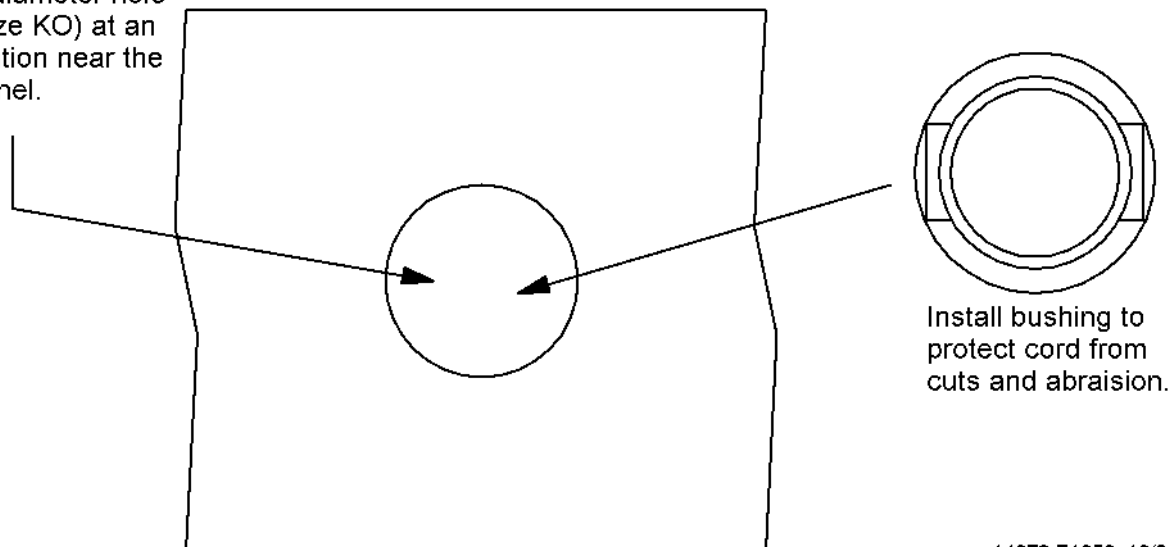

NOTE 1: If reverse airflow is required, remove fan mounting screws, flip fans over, and reassemble.

NOTE 2: The FW2-RD fan panel is intended to be mounted on the INSIDE of the rear rack door, positioned over vent slots. Mounting holes are provided in vent slots. If installed on an older rack door (pre 2004) mounting holes must be drilled by installer.

If the fan is mounted on the outside of the door, the cord will need to be routed through a hole made in the door to accommodate the bushing and cord. See detail below.

Punch a 1 3/8" diameter hole (1-inch trade size KO) at an appropriate location near the fan panel.
